# User's Newsletter

TI Introduces "Speaking" Math Series

Texas Instruments introduces an innovative Mathematics Courseware Series of *Solid State Software*™ Command Modules developed in conjunction with Scott, Foresman and Company, a leading educational publisher. The first three modules—Addition and Subtraction 1, Addition and Subtraction 2, and Multiplication 1—are geared for the elementary level student. The modules work with or without the Texas Instruments *Solid State Speech*™ Synthesizer (sold separately).

Each module contains activities designed to challenge a child with colorful, interesting

Addition and Subtraction 2 guides a child through the addition and subtraction skills for numbers up to 18 with colorful tutorial routines and reinforcing drills.

practices that include tutorial routines and reinforcing drills. The Addition and Subtraction 1 module begins by teaching the basic concept of counting from zero to nine. Then, the principles of addition and subtraction are introduced using these numbers. The Addition and Subtraction 2 module extends the fundamentals of these skills to include numbers up to 18. The Multiplication 1 module provides practice in the basic multiplication concept for factors zero through nine. The modules present addition, subtraction, and multiplication in both vertical and horizontal formats.

The optional Speech Synthesizer adds the feature of computer-generated speech to the color graphics and musical sounds of the computer. The computer's voice then can give directions, read the equations, and encourage the child to "Try again" when he or she gives an incorrect answer. The addition of speech strengthens the learning process since the child can hear, as well as see, the correct answers.

The suggested retail price for Addition and Subtraction 1 (model number PHM 3027), Addition and Subtraction 2 (model number PHM 3028), and Multiplication 1 (model number PHM 3029) is $39.95 per module. The suggested retail price of the Speech Synthesizer is $149.95.

TI's Addition and Subtraction 1 Command Module makes learning addition and subtraction facts for numbers zero through nine fun and challenging. The Speech Synthesizer is optional.

Multiplication 1, developed by TI in conjunction with Scott, Foresman and Company, makes the learning of basic multiplication facts an exciting experience.

Newest Software Packages from TI

Texas Instruments now adds 11 more software packages to the growing list of applications programs available for the TI-99/4 and TI-99/4A Home Computers.

Munch Man

Four cunning Hoonos are in pursuit of your Munch Man. Can he make it to an energizer in time to change the attack or will the Hoonos devour him? With the Munch Man *Solid State Software*™ Command Module, you must outmaneuver the Hoonos, as you try to clear the maze by eating all the dots, without being eaten by the Hoonos.

You start the game with three Munch Men, one already in the maze and two in reserve. Four Hoonos are ready to escape from a black cell seconds after the game begins. If your Munch Man is eaten, the maze freezes, returning these tricky Hoonos to the black cell, while another Munch Man appears at the bottom of the maze.

NEWEST SOFTWARE (cont'd)

The game offers variety and excitement, challenging your every move. It tests your skill as you try to score points by eating all the dots and by capturing Hoonos while your Munch Man is energized. As you attempt to score these points, you must try to avoid being eaten by the Hoonos.

A one-player game, Munch Man is designed to provide limitless hours of family entertainment. The Command Module (model number PHM 3057) has a suggested retail price of $39.95. The TI Wired Remote Controllers are optional. Munch Man will be available in March, 1982.

Scott Adams Adventure Games

Have you ever dreamed of going on an Adventure and facing numerous challenges along the way? Now, with the Adventure Command Module and one of the many cassette- or diskette-based games developed by Adventure International, you can experience many different adventures without leaving the comfort of your home.

To play Adventure, you need both the Adventure Command Module (described in the November issue of the User's Newsletter) and a cassette- or diskette-based Adventure game. In addition to *Pirate Adventure*, the free game included with the module, 10 games are now available in both cassette and diskette versions. *Adventureland* (diskette Model PHD 5046 or cassette Model PHT 6046) begins in the forest of an enchanted world. By exploring this world, you can locate 13 treasures, as well as the special place for storing them to score points. *Mission Impossible* (diskette Model PHD 5047 or cassette Model PHT 6047) starts with a tape recorder in a briefing room. Can you find the mysterious person who just ran out of the room as you try to save the
With TI's exciting new Munch Man arcade game, four cunning Hoonos are in hot pursuit of your Munch Man while he races to an energizer to change the attack.

world's first nuclear reactor from destruction?

Voodoo Castle (diskette Model PHD 5048 or cassette Model PHT 6048) begins with you in a chapel looking at a closed coffin. You try to find the information necessary to free Count Cristo from the fiendish curse placed on him by his enemies. In *The Count* (diskette Model PHD 5049 or cassette Model PHT 6049) you wake from a nap to find yourself in a strange bed holding a tent stake. Now it's up to you to discover who you are, what you are doing in Transylvania, and why the postman delivered a bottle of blood.

Strange Odyssey (diskette Model PHD 5050 or cassette Model PHT 6050) begins as you realize that you are stranded on a small planetoid and must repair your ship before you can go home. As you search the planet for the necessary parts, try to discover the secrets of an ancient civilization, collecting treasures as you go. *Mystery Fun House* (diskette Model PHD 5051 or cassette Model PHT 6051) challenges you to figure out how to get inside before the exploration begins. Once inside, you'll see all the typical Fun House sights which are concealing a valuable prize.

Pyramid of Doom (diskette Model PHD 5052 or cassette Model PHT 6052) starts in a desert near a pool of liquid, with a pole sticking out of the sand. As you investigate fur-

ther, you find a pyramid only recently uncovered by the shifting sands. Find its entrance, collect the treasures, and then try to escape from the pyramid. *Ghost Town* (diskette Model PHD 5053 or cassette Model PHT 6053) contains both treasures and real ghosts. Explore all of the old buildings and the entire area thoroughly to see how many treasures you can locate.

The *Savage Island Series* (diskette Model PHD 5054 or cassette Model PHT 6054) begins on the edge of an impenetrable jungle. As you explore the island in this two-part series, you may meet some very unusual creatures. Either become the world's greatest hero or go to a quick, horrible death. *The Golden Voyage* (diskette Model PHD 5056 or cassette Model PHT 6056) starts with your locating the royal palace in the Persian City. In the palace, you meet an aging king who only has three days to live, unless you can restore his youth. Starting with only a bag of gold, you eventually set sail on a quest for the mythical fountain of youth.

The diskette version of these games has a suggested retail price of $29.95. It requires the Adventure Command Module and the TI Disk Memory System (TI Disk Drive Controller and TI Disk Memory Drive). The cassette version has a suggested retail price of $29.95. It requires the use of the Adventure Command Module, a cassette recorder, and the TI Cassette Interface Cable.

Personal Record Keeping from Texas Instruments

by Lawrence R. De Rusha, Jr.

If you are looking for an easy-to-use computerized filing system, Personal Record Keeping from Texas Instruments might be what you need.

Features

This software package comes in the form of a 24K ROM module that features a logically ordered procedure for creating, updating and sorting files; calculating simple statistics; and generating reports.

The minimum hardware configuration requires either a 99/4 or 99/4A console with a cassette or disk system. Although it is not required, a printer will help you take full advantage of the report-writing option.

Personal Record Keeping is menu-driven and sorts files or subsets consisting of characters, integers, decimals or scientific notation. You can perform math transformations on any numeric item in a file by using any one of 18 formula options. In addition, Personal Record Keeping lets you analyze any numeric item by evaluating it statistically.

Performance

The Personal Record Keeping module achieves what it set out to do. It is a convenient simple filing system that requires no advanced programming knowledge or special training.

The module prompts users through each step of setting up a file structure. A file consists of several pages, each containing up to 15 items. The total number of items and their length determine the number of available pages.

The versatility of the sorting routines is excellent. You can sort any item in a file or selected items on selected pages. Sorts can be according to user-defined parameters or in ascending or descending order.

A sample file of 41 pages with 13 items required over three minutes for a sort in descending order. As the program manual states, "A long list may require a noticeable time to sort."

To accomplish math transformations more complex than the program's formula selections, you use combinations of formulas in a two-step procedure. Since math transformations alter the values of existing file items, you may have to store original data before performing transformations, as the documentation suggests.

You can statistically evaluate any numeric item with a keystroke. Mean, standard deviation, maximum and minimum values are examples of the data you can obtain from this selection.

A linear-fit analysis is also possible with this module. You can substitute any item for x and y.

The size limitations on individual items and on the number of pages are restrictive but are not too severe. The system forces you to be brief, but its flexibility more than compensates.

Ease of use

TI's Solid State Software command module is designed to plug into the TI console and makes installation fast and easy. It is designed for nontechnical users who prefer the "snap-and-go" approach to operation.

The program provides a main index for operational selections and includes menus for specific parameters. The program prompts users throughout. These two factors are the key to the simplicity of the system.

Error handling

A "beep" alerts you to input errors, and the cursor remains at the error point until you enter acceptable input. In several instances, error messages appear. During numeric operations, for example, the error message "Character Item Unacceptable" appears if you try to enter a character instead of a number.

Power failures are deadly to the Personal Record Keeping Module. You lose all data if power is interrupted, and the program provides no crash recovery.

Documentation

The manual is easy to read and well illustrated. It contains a sample to key in and a clear, concise overview of the module's features.

There is one omission from this excellent 48-page manual. The statistical linear-fit analysis is ignored. Those who are unfamiliar with this procedure are on their own with this feature.

Although the documentation doesn't include an index, the table of contents is well delineated. In this case, it works fine as an index.

Overall, the manual is well organized and useful.

Summary

Personal Record Keeping is an effective filing system that performs its job well, and its additional features add power to the program and the 99/4.

International Home Computer Users' Association

Now you can take advantage of an exciting new organization designed to serve the needs of Home Computer users and users' groups. The International Home Computer Users' Association (ICA) is a multi-service, non-profit organization that offers these initial services:

- Information and referrals
- A monthly newsletter
- A biweekly bulletin
- A newsletter exchange
- Special interest group coordination
- Club start up kits and assistance
- An international amateur radio network of computers
- Consumer aid
- Programming assistance
- Hardware and software evaluations
- An annual convention
- A speaker's bureau
- Seminars on the Pascal and assembly languages

As the Association develops, more services will be added.

In the months ahead, an advisory board will be formed, comprised of Users' Group Presidents who will make proposals and suggestions to a full time staff and volunteers located at the Center in San Diego, California.

You Don't Have To Be Sighted To Use The TI Home Computer!

by Duane B. Fischer

Perhaps that claim sounds far fetched, as how can a blind person read the screen? If you equip a TI-99/4 or TI-99/4A with a TI *Solid State Speech* ™ Synthesizer and a Terminal Emulator II *Solid State Software*™ Command Module, it will read the screen aloud. A blind person can pull a BASIC program listing and have it read back in its entirety or as specific lines. The speech option makes this possible and allows totally blind persons to write, read, and edit their own programs without sighted assistance!

You can make the computer into a talking calculator by typing a few program lines. It will read aloud the answer to an equation, thus saving a lot of bead pushing on an abacus. You can alter the pitch and the slope, slow the speaking rate, and alter the vocal inflection by the use of special punctuation and other commands. If you add a TI RS232 Interface and a TI Telephone Coupler (Modem), you can join users on TEXNET℠ service. You can verbally communicate with other users, download programs from other computers, or listen to the Dow Jones averages and United Press International news service, among many others.

I use the speech feature to voice index my diskettes, for a fast verbal directory of names, addresses, and telephone numbers, for examining other programmers' program structure, for rewriting my own programs, for keeping an inventory of products and costs, etc. The limits of its uses are truly determined by the extent of the user's own powers of imagination.

Want a voice listing? Type: LIST"SPEECH" and enter it. If you want a specific line, just type: LIST"SPEECH":100 or for multiple lines LIST"SPEECH": 100-120.

The Terminal Emulator II is a fantastic module, and the speech is very intelligible. It takes some getting used to, but it is well worth the effort.

If you have any questions about the speech option, please contact:

TI Home Computer Users' Groups Continue to Grow

The international scope of TI Home Computer Users' Groups continues to grow. There are now five Users' Groups in Australia and one in Frankfurt, Germany.

These Users' Groups and others around the world are exceedingly helpful in sharing information and ideas.

A complete list of all known Users' Groups follows. If you are interested in starting your own group, write:

ON-GOTO or ON-GOSUB Statement Correction

If you type an ON-GOTO or ON-GOSUB statement with blanks between the numbers, the statement may not execute properly, even though it looks correct when listed. The solution is to edit the line, retype the first character, and press <ENTER>. This will cause the line to be saved correctly.

Example: the program

```
100 INPUT N
110 ON N GOTO 100,100 ,100
```

The program will work with input of 1 or 2, but will fail on input 3. The line will show in a listing as

```
110 ON N GOTO 100,100,100
```

The statement appears correct, but it will not execute properly.

Correction on Using Lower-Case Letters on the TI-99/4

Line 30 of the program listed in Random Bits in the November User's Newsletter should read:

```
30 B$="0000" & SEG$(A$,1,4) &
SEG$(A$,7,4) & SEG$(A$,13,4)
```
